

CIRCULAR ECONOMY OF LEAD BATTERIES

The lead battery industry, with its established circular infrastructure, is a model for other battery chemistries in how to responsibly source, use, reuse and manage materials.

Step 1: Manufacturing

A new lead battery is typically comprised of **80% recycled material**.

Lead from lead batteries can be **in nitely recycled** with no loss of performance.

U.S. lead battery manufacturers source approximately **+83% of lead** from North American recycling facilities.

Step 5: Sourcing & Materials Efficiency

Lead batteries have been recycled for **more than 100 years**.

Step 4: Recycling

Lead batteries have a **99% recycling rate**, the highest of any consumer product in the U.S.

Step 2: Use

Worldwide, lead batteries are used in virtually **every hybrid and electric vehicle**.

Step 3: Collection

Modern, closed-loop recycling in the U.S. keeps **+160 million lead batteries** from landfills each year.

Research and Innovation
Sustainable Practices
Design for Recycling and Efficiency

Lead batteries rank among the **top ve consumer product categories** in sustainability.

Lead battery life has **increased up to 50%** in the last 20 years.

“Lead batteries close the loop more effectively than any other product in the consumer goods space. We’d like to leverage the lessons of this industry to help others reach the same type of performance for their end-of-life products.”
